

Title: Digital Governance and Public Policy Frameworks: A 21st Century Perspective

Tags: Public Policy · Digital Governance · Democratic Accountability · E-Government

1. Overview

This research examines the growing role of digital technology in modern governance and public policy formulation. It analyzes how digital tools influence political participation, improve state administrative capacity, and reshape mechanisms of transparency and democratic accountability in contemporary political systems.

2. Key Focus Areas

- **Digital Governance & E-Government Models:** Analyzing the shift from traditional bureaucracy to digital-first administrative frameworks.
- **Technology & Political Participation:** Exploring how social media and digital platforms empower citizens to engage in political discourse.
- **Public Policy Innovation:** Evaluating the use of Data Analytics and digital tools in formulating more efficient and responsive public policies.
- **Democratic Accountability:** Investigating how digital transparency tools can reduce corruption and increase state accountability to the public.

3. Interdisciplinary Approach

- **Technical Integration:** Leverages my background in **Full-stack Web Development (MERN)** to understand the technical architecture behind secure and transparent e-governance platforms.
- **Political Analysis:** Applies political theory to assess the impact of the digital divide on democratic inclusivity.

4. Academic & Professional Impact

- **Seminar Delivery:** Presented as part of the Political Science Seminar Project, focusing on global diplomacy trends and international cooperation.
- **Methodology:** Conducted through comparative policy analysis and case studies of successful digital transformation in developing nations
